Alfalfa is our world

alfeed

EXPORTACIÓN ALFALFA FEED SL.

Natural and premium quality product

The alfalfa, medicago sativa, is the most important forage plant and it has been used for livestock since ancient times due to its excellent nutritional and medicinal properties. It is a product with perfect balance between protein and fiber, both in neutral and acid detergent, which make it a food with high digestibility and easy consumption to the animal.

alfeed
EXPORTACIÓN ALFALFA FEED SL.

Global Overview

- Alfeed is an out-standing leader in the food-processing industry; Specialized in the farming, production and commercialization of forage of dehydrated alfalfa. From its creation, looking for the synergy between the different plants of pressing and production that compose it.
- The group possesses and operates a great base of assets, seven plants of pressing and production of forage, different sizes of warehouse for the classification of the dehydrated alfalfa according to its qualities.
- With near 175.000 metric tons of annual capacity and more than twelve categories of products classify according to their quality and presentation, we attend predominantly to the needs of the lacteal, cattle and breeding cattle companies.
- We collaborate closely with the local farmers, cooperatives, producers of forage and the departments of agriculture and cattle.
- Alfeed has established world operations and has a leadership position in Asia and MENA region.

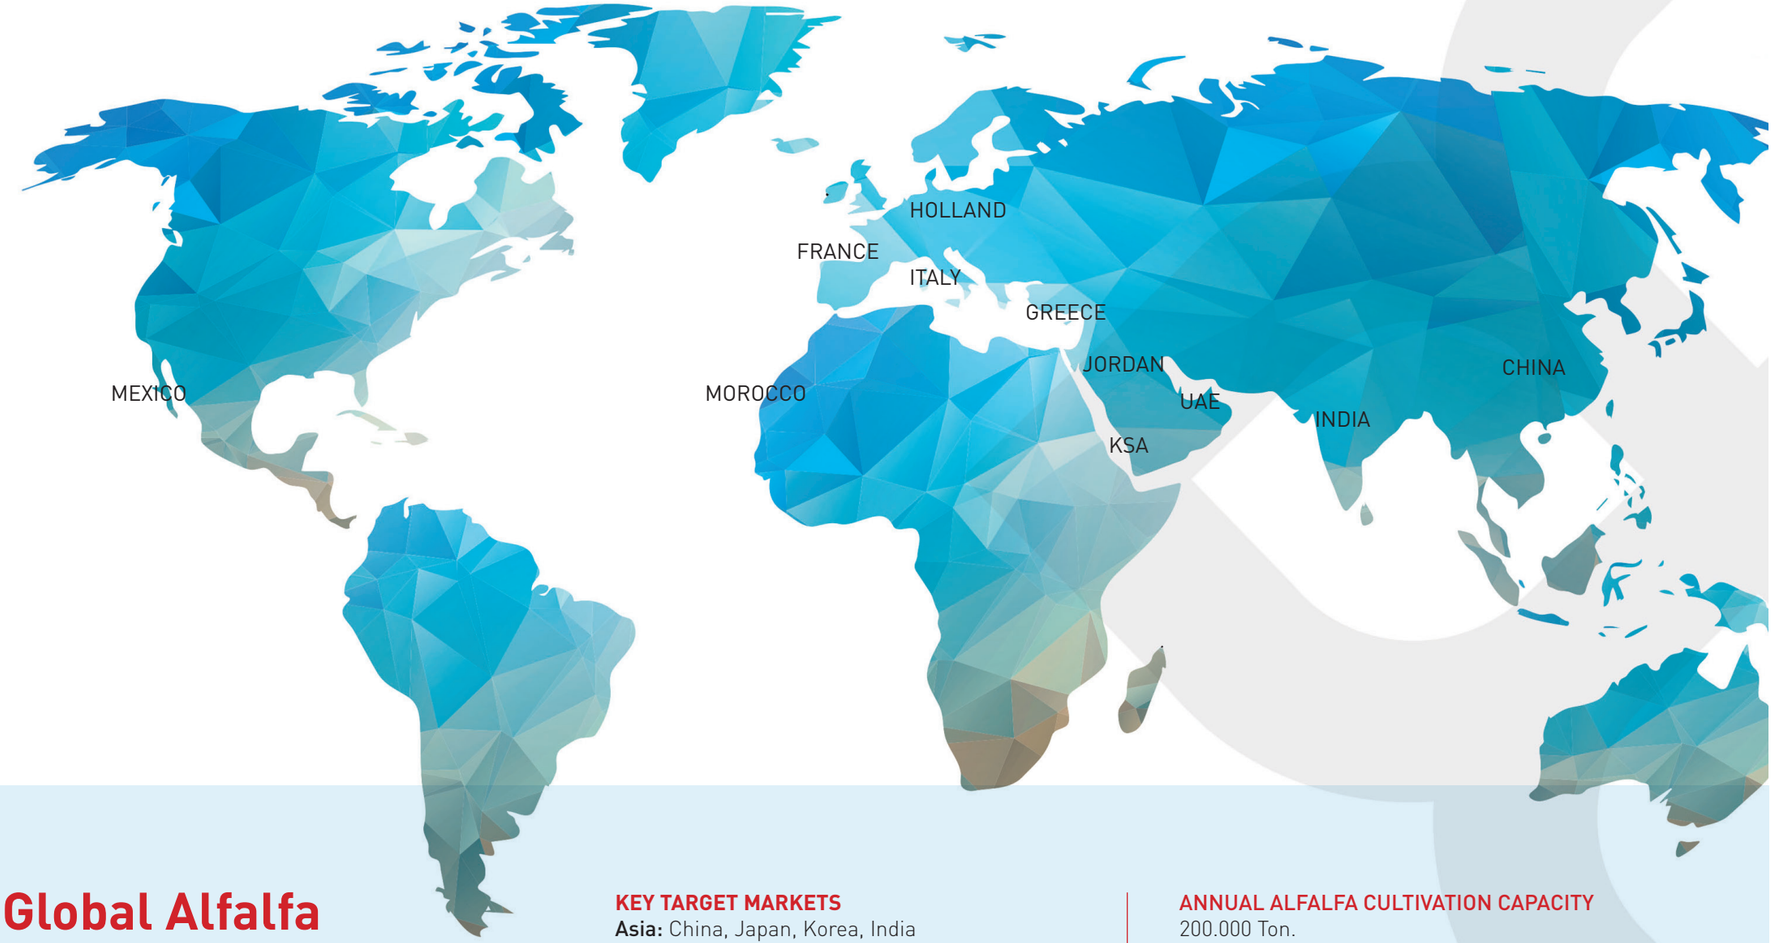
Our Commitment

Our commitment begins with the seed (we commercialize seed of alfalfa echo - type ARAGON, from Seeds MUR), the continuous use of the field so the quality of the alfalfa can be improved, as well as the quantity of the crops and the processes of dehydration. Vertical integration.

We look for the excellence as producers of alfalfa dehydrated in bales and in pellets.

We recognize the increasing worries of our clients related to the traceability of the product, the biosafety measures, the regulatory guarantees, the sanitary guarantees and the homogeneity of the product.

To satisfy their expectations, our quality assurance processes continue evolving, allowing us to provide an ever increasing guarantee of a homogeneous, quality, dehydrated alfalfa product.



Global Alfalfa Supply Chain

KEY TARGET MARKETS

Asia: China, Japan, Korea, India

Europe: France, Greece, Holland, Portugal

Middle East: Saudi Arabia, United Arab Emirates, Jordan, Kuwait, Qatar, Iran

Africa: Morocco, Tunisia, Algeria

ANNUAL ALFALFA CULTIVATION CAPACITY

200.000 Ton.

ANNUAL FORAGE PRODUCTION AND PROCESSING CAPACITY

175.000 Ton.

Farming

Alfeed is characterized by the careful selection of areas that enjoy favorable climate conditions, easy access to water irrigation and high specifications of fertility to guarantee the best possible efficiency of our alfalfa.

Alfeed uses experts in the agro industrial sector and the technical agriculture, assuring the alignment among all the divisions for:

a) Implementing better farming practices and applying modern farming and harvest tecniques.

b) Invest in the latest technologies, machinery and agricultural and irrigation equipments.

c) Source of seeds of the highest quality, raw material and agrochemicals (pesticides and fertilices).

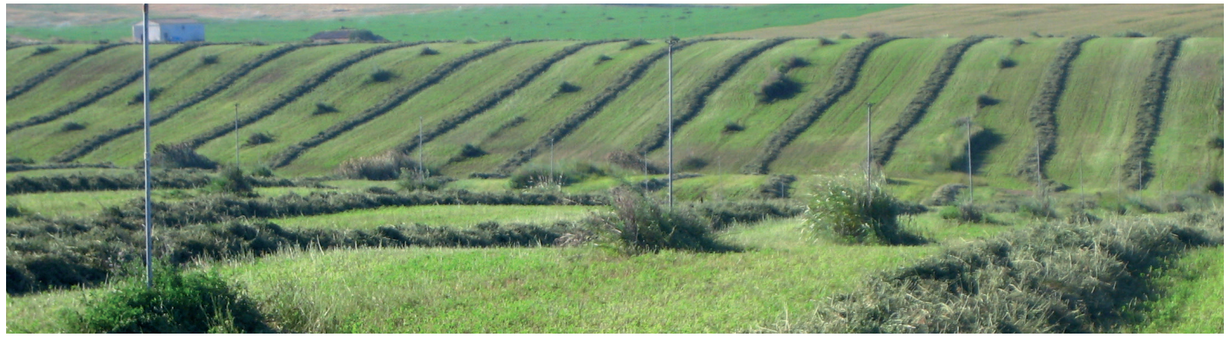
d) To apply the best practices in terms of managing farming, seasonal rotation of crops and crop.

e) Support the ecological and agricultural sustainability and the preserve of natural resources.

f) Beside managing his own agricultural operations, Alfeed has established strong relations with farmers of whole Aragon, signing agreements of long-term supply with them to buy their crops at fixed prices.

Processing

- Alfeed possesses and operates its own plants of production accross the different companies that compose it.
- The production and the processing are considered to be a basic competence of the group and form an integral part of the chain of value.
- In addition, the company possesses specialized facilities of classification and packing for the produced and dehydrated alfalfa.
- Alfeed possesses and operates on seven factories of processing forage with ten lines of production equipped with the latest processing and packing (bullets and pellets) equipments.
- We are investing in processes and technologies highly automated with a minimal human intervention.
- We apply the highest standars of health and safety in all work environments.
- We fulfill the international procedures of the food production and fodders regulation and security.
- We realice internal controls of quality of the products in specialized laboratories (owns and external).
- Incorporation of a culture of continues improvement of the operative efficency and excellence.



Traceability

The Traceability understood as the procedure of instructions of work that define the internal management of the products, as well as the necessary register from the reception of the raw materials, up to the expedition of the final product, in order to be able to reconstruct the historical of our products and to know at any time, the product more immediate destination or origin.

Internal traceability, obtain the trace that a product is leaving in all the internal processes ofa company, with its manipulations, composition, used machinery, shift, temperature, lot, ect., that is to say, al the indications that they can do or can make change the product for the final consumer.

External traceability, is to externalize the information of the internal traxe and some indications to add if necessary, as a break in the package, a change in the process of transport, etc.
